

Savvy Deep Dive

In-depth Exploration of AI, Machine Learning and Blockchain for a Business Unit

Artificial Intelligence, Machine Learning and Blockchain provide innovative ways to improve the efficiency and efficacy of business processes. Through a combination of executive education, training sessions, workshops and strategic consultancy, Savvy Data Insights helps companies transparently adopt these technologies and explore significant growth opportunities with confidence.

Savvy Deep Dive: a full-day workshop to explore in detail areas of Machine Learning, Artificial Intelligence and Blockchain that are suitable for a particular business unit.

Who is it for? Leadership and functional teams of a particular business unit who want to understand how their business processes can be transformed using these technologies.

What's involved? Savvy Deep Dive covers in detail the main applications of Artificial Intelligence, Machine Learning and Blockchain to a particular business unit, the main challenges and opportunities as well as required internal (and external) datasets. The workshop supports functional teams to clearly understand the necessary steps to apply these technologies to their business processes.

Savvy Data Insights is a one-stop-shop for data-driven innovation: we help companies improve the efficiency and effectiveness of their decision making processes using innovative technologies such as Machine Learning, Artificial Intelligence or Blockchain.
