

Savvy Tech 101

An Introduction to Artificial Intelligence, Machine Learning and Blockchain

Artificial Intelligence, Machine Learning and Blockchain provide innovative ways to improve the efficiency and efficacy of business processes. Through a combination of executive education, training sessions, workshops and strategic consultancy, Savvy Data Insights helps companies transparently adopt these technologies and explore significant growth opportunities with confidence.

Savvy Tech 101: a half-day intensive workshop to introduce key concepts, opportunities and risks of using Artificial Intelligence, Machine Learning and Blockchain.

Who is it for? Business leaders and executives who want to have a high-level understanding of the main technologies required to implement data-driven digital transformation.

What's involved? Savvy Tech 101 provides an overview of Artificial Intelligence, Machine Learning and Blockchain using intuitive business language. We cover the main problems that can be solved using these technologies along with successful use cases from different industries to enable executives to lead digital innovation with confidence and increase their companies growth.

Savvy Data Insights is a one-stop-shop for data-driven innovation: we help companies improve the efficiency and effectiveness of their decision making processes using innovative technologies such as Machine Learning, Artificial Intelligence or Blockchain in a transparent manner.
